GNU nano 7.2                                /home/hadoop/hadoop/etc/hadoop/hadoop-env.sh

##
## Precedence rules:
## (yarn-env.sh|hdfs-env.sh) > hadoop-env.sh > hard-coded defaults
## (YARN_*.sh|hdfs_*.sh) > HADOOP_*.sh > hard-coded defaults
##

# Many of the options here are built from the perspective that users
# may want to provide OVERRIDING values on the command line.
# For example:
#
# JAVA_HOME=/usr/java/testing/hdfs dfs -ls
#
# Therefore, the vast majority (BUT NOT ALL!) of these defaults
# are configured for substitution and not append. If append
# is preferable, modify this file accordingly.
##

# Generic settings for HADOOP
##

# Technically, the only required environment variable is JAVA_HOME.
# All others are optional. However, the defaults are probably not
# preferred. Many sites configure these options outside of Hadoop,
# such as in /etc/profile.d

# The java implementation to use. By default, this environment
# variable is REQUIRED on all platforms except OS X.
export JAVA_HOME=/usr/lib/jvm/jdk1.8.0_202

# The language environment in which Hadoop runs. Use the English
# environment to ensure that logs are printed as expected.
export LANG=en_US.UTF-8

# Location of Hadoop. By default, Hadoop will attempt to determine
# this location based upon its execution path.
# export HADOOP_HOME=

# Location of Hadoop's configuration information. I.e., where this
# file is living. If this is not defined, Hadoop will attempt to
# locate it based upon its execution path.
#
# NOTE: It is recommended that this variable not be set here but in
# /etc/profile.d or equivalent. Some options (such as
# --config) may react strangely otherwise.
# export HADOOP_CONF_DIR=${HADOOP_HOME}/etc/hadoop

```

**localhost:8088**

The image shows a Kali Linux virtual machine environment. The top part of the screen displays the Kali Linux desktop with various application icons. The main part of the screen is a web browser window showing the Hadoop cluster management interface. The browser's address bar shows the URL '192.168.61.128:8088/cluster'. The page title is 'All Applications'. On the left side, there is a sidebar with a 'Cluster' section containing links like 'About', 'Nodes', 'Node Labels', 'Applications', 'NEW', 'NEW SAVING', 'SUBMITTED', 'ACCEPTED', 'RUNNING', 'FINISHED', 'FAILED', 'KILLED', and 'Scheduler'. Below this is a 'Tools' section. The main content area is titled 'Cluster Metrics' and contains several tables. The first table, 'Cluster Nodes Metrics', shows metrics for 'Active Nodes', 'Decommissioning Nodes', 'Decommissioned Nodes', and 'Lost Nodes'. The second table, 'Scheduler Metrics', shows metrics for 'Capacity Scheduler' and 'Scheduling Resource Type'. Below these tables is a section for 'Showing 0 to 0 of 0 entries' for a table with columns: ID, User, Name, Application Type, Application Tags, Queue, Application Priority, StartTime, LaunchTime, FinishTime, State, FinalStatus, Running Containers, Allocated CPU Vcores, Allocated Memory MB, and Allocated GPUs. The table is currently empty, and a message 'No data available in table' is displayed. The bottom of the screen shows the Windows taskbar with various icons and the system clock indicating 07:50 AM on 15-08-2024.
